

SARITHRA MS

AI QA ENGINEER · QA LEAD — GENAI & INTELLIGENT TESTING

London, United Kingdom · 07537891855 · sarii.muthu@gmail.com

Portfolio: sarithra-muthu.github.io · LinkedIn: linkedin.com/in/sarithra-muthu

PROFESSIONAL SUMMARY

QA Engineering Lead with 10+ years across Finance, Healthcare, Insurance and Banking, now specialising in AI-augmented quality engineering. Designed and shipped 10 LLM-powered agents used in live enterprise QA delivery at WPP, covering API test analysis, scenario generation, payment file validation and knowledge automation, saving ~40 hours of manual effort on a single production integration and cutting test design effort by 50%. ISTQB AI Certified. Deep global delivery record: led in-house and offshore QA teams across APAC, EMEA, NA and LATAM, working on the ground in India, Singapore, Spain and the UK. Human-in-the-loop design, LLM-as-a-Judge evaluation and RAG grounding are core to my approach.

AI AGENTS BUILT (IN ENTERPRISE USE)

- **Integration API Test Execution Assistant** — LLM-powered analysis of API test results; flags discrepancies and links anomalies to past defects. Used on a live production integration. *Impact: ~40 hrs of manual effort saved.*
- **ScenarioCraft — Scenario Design Assistant** — analyses BRDs/SDDs and proposes module-wise test scenarios, human-in-the-loop by design; being rebuilt as a standalone agent. *Impact: 50% of scenario and test case prep effort saved.*
- **E-Invoice Compliance Validator** — validates e-invoice XML against solution designs and compliance rules; separates data from mapping issues and outputs severity-rated defect reports. *Impact: critical defects caught before a European go-live.*
- **Payment File Validation Agent** — LLM-based validation of payment XML against Pain schema, SDDs and test data across country rollouts. *Impact: ~5 new defects found in rollouts.*
- **Tax & BRD Scenario Analysis** — interprets complex tax BRDs/SDDs and generates structured QA scenarios for statutory compliance testing. *Impact: delivered QA coverage for the US & Canada rollout.*
- **Macwiz — ERP Training Bot** — RAG-based training and reference agent for ERP flows and business processes; enables team self-service. *Impact: reduced onboarding friction across the team.*
- **RegIntel — Regression Intelligence Agent** — captures regression issues and resolutions into a structured, searchable knowledge base (in progress).
- **Payment BRD Generator Agent** — generates BRD drafts from input requirements, cutting turnaround for country-specific documents (in progress).
- **Release & Environment Assistant** — answers environment, release and downtime questions with cited sources drawn from emails and team chats.
- **Daily Briefing Automation** — automated morning brief combining workstream health, urgent items and focus blocks from 14 days of email, chat and calendar data.

SKILLS

- **AI & GenAI:** GenAI testing, prompt engineering, AI-augmented testing at scale, hallucination and bias evaluation, LLM-as-a-Judge, human-in-the-loop (HITL) design, RAG pipelines, AI cost governance (model tier selection, prompt and context management)
- **Build & tooling:** Python and SQL (working knowledge), FastAPI, Gradio, Groq LLM inference, Supabase with row-level security, Render and Hugging Face deployment, Postman, JIRA, Confluence
- **QA core:** Test strategy and planning, risk-based testing, functional testing (Smoke, SIT, UAT, exploratory, regression), defect management and RCA, CI/CD QA integration, test data and migration validation

- **Leadership:** Team and stakeholder leadership, offshore team management, UAT coordination at scale (120+ users, 1,000+ test cases per release), talent acquisition and QA hiring

APPLICATIONS & PLATFORMS TESTED

- **ERP:** Enterprise finance ERP (Maconomy / Deltek), SAP (MM, CM, CRM, CD, BO)
- **Web & mobile:** Web and e-commerce platforms, mobile apps (iOS & Android)
- **APIs & integration:** REST APIs (Postman), IICS API integrations, payment XML (Pain schema) validation
- **Other systems:** Java & .NET applications, SQL databases, i90 mainframe systems

WORK HISTORY

QA Lead · WPP, London, United Kingdom

Nov 2020 – Present

- Led end-to-end QA for enterprise ERP (Maconomy) rollouts across the US, Canada, APAC, EMEA and LATAM, including complex tax and statutory compliance scenarios and multi-region UAT coordination.
- Currently leading QA for a complex enterprise integration programme: hands-on API testing, authoring API specifications with LLM support, and partnering with performance and security testing leads.
- Designed and shipped 10 LLM-powered QA agents in enterprise use (see AI Agents Built), applying LLM-based validation to support UAT alignment and business logic interpretation across multi-region rollouts.
- Developed comprehensive test approaches and plans for the Maconomy ERP and mobile apps (iOS & Android), covering methodology, scope, objectives and timelines.
- Hands-on across functional testing levels: smoke, system integration, UAT, exploratory and regression; collaborated with performance and non-functional teams to integrate results into QA scope.
- Led and mentored testers and UAT leads, providing guidance, training and support; managed technical ticket prioritisation, resolution and defect verification.
- Led end-to-end validation of migrated data in large-scale QA cycles, ensuring data integrity, consistency and accurate user outcomes.
- Built QA dashboards for defect leakage, coverage and readiness tracking, giving leadership real-time visibility.

Senior Test Engineer & Test Lead · Sogeti, Capgemini / Zurich Insurance, Barcelona, Spain

Mar 2019 – Jan 2020

- Led functional and integration testing for front-end applications, i90, mobile app, API integrations and migrated policies in Agile environments.
- Designed comprehensive test cases from complex business requirements and owned all test documentation and artifacts.
- Managed a team of 2–3 testers across test planning, execution and defect triage; collaborated with project managers and developers on estimation, stand-ups and defect calls using JIRA, Confluence and Postman.
- Introduced basic CI/CD QA workflows to support faster deployments and improve testing reliability.

Senior Test Engineer · QAssure Tech / International SOS, Singapore

2014 – 2015

- Tested healthcare, travel and concierge platforms across 7 integrated apps including mobile (iOS/Android), reporting and inventory systems; led test case design, execution, defect triage and RCA in Agile and Waterfall environments.

Test Engineer · ITCAN / DBS Bank, Singapore

2014

- Hands-on testing of the DBS Trade Finance application: requirement analysis, test scenario creation and end-to-end test execution.

- Led mainframe and SAP functional and integration testing for the merger of Lloyds Trustees Bank and Bank of Scotland, supporting a large-scale insurance portfolio; managed the full QA lifecycle and acted as primary POC for SAP QA.

Earlier career: began as a Junior Electronic Design Engineer performing PCB design, schematic reviews and board bring-up testing for embedded hardware systems, providing a strong foundation for QA in hardware–software integrated environments.

AI LEADERSHIP & COMMUNITY

- Proposed and run monthly AI Hub calls for a global QA community; built the central AI agent hub and manage the sessions month on month.
- Nominated to an enterprise AI Centre of Excellence build-partner network; member of the Copilot Champion network.
- Presented AI agents to senior stakeholders including the Programme Lead and platform Director.
- Shipped a working full-stack AI MVP in a 24-hour hackathon: FastAPI, Gradio, Groq, Supabase with row-level security, deployed to Render and Hugging Face.

CERTIFICATIONS & LEARNING

- ISTQB AI Certified Tester (May 2025) · ISTQB Certified (2012) · BrowserStack AI certification
- Generative AI in Software Testing (2025) · Introduction to Machine Learning Models (AI) Testing (2025)
- SAP Material Management Application Associate — Procurement, SAP ERP 6.0 (2018)
- In progress: 100x Engineers Applied GenAI 6-month cohort (Mar–Sep 2026) · IBM Data Science Professional Certificate (SQL & Python modules completed) · Prompt Engineering Specialization, Vanderbilt University

EDUCATION

B.E. Electronics and Communication Engineering — ESEC, Anna University
